DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-13 are rejected under 35 U.S.C. § 102(e) as being clearly anticipated by Chen et al (US 2004/0265905 A1).

Chen et al disclose a fluorescent microarray analyzer comprising: a light source (1) for emitting a light beam; a light processing unit (3-5) for focusing the light beam onto a biochip (6) and exciting fluorescent targets on the biochip to produce fluorescence; a focusing lens (8) for focusing the fluorescence onto a spectrophotometer/spectrometer (13), a spectrophotometer/spectrometer (13) for detecting signal of the fluorescence; and an output device (computer using QOIBase32 software - last sentence of paragraph [0033]) for directly outputting/displaying the signal detected by the spectrophotometer/spectrometer. The processing unit comprising a beam splitter (4) and a focusing lens (2) between the light source and the beam splitter. A platform holds the biochip and selectively moves the chip in two different directions (first sentence of paragraph [0034]). Applicant's attention is directed to Chen et al in its entirety.

Additional Prior Art

In paragraph [0034], Kornblith et al (US 2004/0072722 A1) disclose the use of a spectrophotometer to read the intensity of fluorescence for each discrete location in a microarray.

Art Unit: 2877

In lines 4-15 of column 6, Elghanian et al (US 6,664,061 B2) disclose the use of a spectrophotometer to scan a microarray and collect fluorescence and intensity data.
